**Competing Models of Linguistic Change Dec 26 2019** The articles of this volume are centered around two competing views on language change originally presented at the 2003 International Conference on Historical Linguistics in the two important plenary papers by Henning Andersen and William Croft. The latter proposes an evolutionary model of language change within a domain-neutral model of a 'generalized analysis of selection', whereas Henning Andersen takes it that cultural phenomena could not possibly be handled, i.e. observed, described, understood, in the same way as natural phenomena. These papers are models of succinct presentation of important theoretical framework. The other papers present and discuss additional models of change, e.g. invisible hand-processes, system-internal models, functional and cognitive models. Most papers do not subscribe to the evolutionary model; instead, they focus on functional factors in the selection and propagation of variants (as opposed to factors of code efficiency), or on cognitive and pragmatic perspectives. Several papers are inspired by the late Eugenio Coseriu and by Henning Andersen's theories on language change. In particular, the volume contains articles proposing interesting grammaticalization studies and extended models of grammaticalization. The clear presentation of important and competing approaches to fundamental questions concerning language change will be of high interest for scholars and students working in the field of diachrony and typology. The languages referred to in the papers include Cantonese, the Chukotko-Kamchatkan languages, Danish, English, Eskimo languages, German, Norwegian, Russian, Spanish, and Swedish.

**Recruiting and Retaining Generation Y Teachers Sep 03 2020** Engage a new generation of teachers to create effective learning communities! **Handbook of Research in Education Finance and Policy Apr 10 2021** Sponsored by the Association for Education Finance and Policy (AEFP), the second edition of this groundbreaking handbook assembles in one place the existing research-based knowledge in education finance and policy, with particular attention to elementary and secondary education. Chapters from

the first edition have been fully updated and revised to reflect current developments, new policies, and recent research. With new chapters on teacher evaluation, alternatives to traditional public schooling, and cost-benefit analysis, this volume provides a readily available current resource for anyone involved in education finance and policy. The Handbook of Research in Education Finance and Policy traces the evolution of the field from its initial focus on school inputs and revenue sources used to finance these inputs, to a focus on educational outcomes and the larger policies used to achieve them. Chapters show how decision making in school finance inevitably interacts with decisions about governance, accountability, equity, privatization, and other areas of education policy. Because a full understanding of important contemporary issues requires inputs from a variety of perspectives, the Handbook draws on contributors from a number of disciplines. Although many of the chapters cover complex, state-of-the-art empirical research, the authors explain key concepts in language that non-specialists can understand. This comprehensive, balanced, and accessible resource provides a wealth of factual information, data, and wisdom to help educators improve the quality of education in the United States.

**Wasted in Engineering Nov 24 2019 'Engineering padicha nalla future - If you study engineering, you will have a good future.' This is a claim often repeated to children and teenagers by parents and teachers in many parts of India. But only those who have gone through an engineering college life know that it's not completely true. There is a difference between calling yourself as an engineering graduate and an engineer. India produces millions of engineering graduates like you and me but only very few of us are actual engineers. Many of us just graduate with an engineering degree, with an artistic dream in mind. What do you think is the difference between engineers in many countries around the world and engineers from India? In other countries, if David Pascal studied electrical engineering in college, few years later you can find him working as an electrical engineer. In India, if Ram Krishnamurthy studied electrical engineering, few years later you can find him working in a completely irrelevant field like software coding, banking, photography and even movie directing. This book is not about the few engineering students in your class who love engineering. I don't hate them. In fact, I am very jealous that they study what they love. This book is about the majority of engineering graduates whose lives are wasted in engineering and is intended to tell you why you should make an attempt in pursuing your real passion, instead of being suffocated under the weight of an engineering degree. This is a story of India's Youth. Welcome to India, the land of Wasted Engineers.**
