Equestrian Rebels Dec 02 2019 Mariano Azuela (Mexico, 1873-1952) was a medical doctor by profession, recipient of Mexico's Premio Nacional de Literatura (1949), a distinguished member of El Colegio Nacional and, by mid-century, one of Mexico's leading novelists and literary critics. The author of novels, novellas, plays, biographies, and literary criticism, Azuela served as field doctor under Francisco Villa during the Mexican Revolution and, after Villa's military defeats in 1915, published *Los de abajo* (The Underdogs, 1915) while in exile in El Paso, Texas. This book of essays commemorates the first centenary of *Los de abajo*, and traces its impact on twentieth-century autobiographies, memoirs and, more specifically, on the *Novel of the Mexican Revolution*. Equestrian Rebels: Critical Perspectives on Mariano Azuela and the *Novel of the Mexican Revolution* includes a full-length introduction and nineteen essays by leading international scholars who study Azuela and other novelists of the Mexican Revolution - such as Martín Luis Guzmán, Nellie Campobello and, among others, José Rubén Romero - from current, yet contrasting and innovative theoretical perspectives. Especially written for this volume, these critical essays are grouped into five sections that

separately probe and analyze Azuela's realism and contemporary affinities with photography; Azuela's literary criticism; centennial studies on Los de abajo; critical approaches to other novels by Azuela; three independent analyses of Nellie Campobello's Cartucho (1931); and a concluding section on literary representations of Mexican colonialism and revolution in the narratives of Juan Rulfo (El llano en llamas), Carlos Fuentes (Gringo viejo), and David Toscana (El último lector). This book will be of importance to scholars, teachers, students, and the general reader interested in topics related to the literary, cultural, and political forces and conflicts that led to the transformation of Mexico into a modern nation.

Intermediate Algebra Jul 09 2020 As the title implies, this is a straightforward approach to intermediate algebra that guides the student step-by-step toward acquiring mathematical skills with examples, exercises, and more examples and exercises. Textual explanations are precise, brief, and to the point and are always accompanied by illustrative examples.

Teaching, the Hardest Job You'll Ever Love Sep 03 2022 This book is a realistic guide that can help the high school teacher and community. It includes ways to maintain one's health, how to balance one's personal and school life, and how to interact in a better, successful manner.

Handbook for Waterworks Operator Certification Sep 10 2020 This three-volume series is designed to prepare waterworks operators for certification and licensure exams. Volume 1 is the only such volume based on the recently amended Safe Drinking Water Act and provides the tools to understand the microbiological and chemical hazards of water in light of the quality standards treatment plants must achieve. With its clear explanations of basic math, hydraulics, electricity and plant processes, it prepares the drinking water plant operator for further study of all aspects of drinking water operations, including purification and distribution. Abundant cases, problems, and a full-scale battery of examination questions enable the reader to apply the book's lessons into practice both on the job and in the classroom. Volume 2 is designed to give the experienced operator the means to advance to higher levels. Its content has been selected and organized in accord with SDWA requirements for the continuing education of operators. After reviewing basic math, this volume presents information and calculations for critical areas of operator responsibility - from intake, disinfection and pumping through odor control and distribution. Self-check questions and a final examination enable the reader to monitor progress and prepare for certification and licensure testing Volume 3 is a forthcoming title for the year 2001 and is intended for advanced operators. It represents an in-depth treatment of plant processes and operations, and stresses troubleshooting and problem solving. Questions and answers are included, plus an entire sample test suitable for self-study prior to licensure examinations

Advances in Intelligent Tutoring Systems Sep 30 2019 May the Forcing Functions be with You: The Stimulating World of AIED and ITS Research It is my pleasure to write the foreword for Advances in Intelligent Tutoring Systems. This collection, with contributions from leading researchers in the field of artificial intelligence in education (AIED), constitutes an overview of the many challenging research problems that must be solved in order to build a truly intelligent tutoring system (ITS). The book not only describes some of the approaches and techniques that have been explored to meet these challenges, but also some of the systems that have actually been built and deployed in this effort. As discussed in the Introduction (Chapter 1), the terms "AIED" and "ITS" are often used interchangeably, and there is a large overlap in the researchers devoted to exploring this common field. In this foreword, I will use the term "AIED" to refer to the search area, and the term "ITS" to refer to the particular kind of system that AIED researchers build. It has often been said that AIED is "AI-complete" in that to produce a tutoring system as sophisticated and effective as a human tutor requires solving the entire gamut of artificial intelligence research (AI) problems.

Handbook on Student Development Sep 22 2021 Because this book's main objective is to foster and promote student development, it should appeal to those who advise, counsel, and teach undergraduate and graduate students, particularly those in psychology, education, and other social sciences. Along with a plethora of stimulating ideas for practice and research, the book contains the results of research having immediate applications to students' educational and career direction needs. Readers will find more than 90 articles in this book distributed across three significant challenges to students' development: the academic, occupational, and personal. Further, the material presented has been organized around three distinct approaches to these challenges: advising, career development, and field placement activities. The source for these articles is the official journal, Teaching of Psychology, of Division Two of the American Psychological Association.

Bombs Away Jul 21 2021 Bombs Away By: Gary A. Horowitz The Sterling Hall Bombing that occurred on the University of Wisconsin-Madison campus on August 24, 1970, was committed by four young people as a protest against the university's research connections with the U.S. military during the Vietnam War. The bomb was intended to destroy the Army Mathematics Research Center (AMRC). It caused massive destruction to other parts of the building and nearby buildings as well.

It resulted in the death of one, injury of three others, and significant destruction to the physics department and its equipment. Author Gary A. Horowitz was a student at Madison. This is his account of that horrific event.

Too Good to Be True: The Colossal Book of Urban Legends Aug 29 2019 "If you enjoy these too-good-to-be-true tales, Brunvand's new book will give you hours of pleasure."—Chicago Tribune A fabulously entertaining book from the ultimate authority on those almost believable tales that always happen to a "friend of a friend." Alligators in the sewers? A pet in the microwave? A tragic misunderstanding of the function of cruise control? No, it didn't really happen to your friend's sister's neighbor: it's an urban legend. And no matter how savvy you think you are, you are sure to find in this collection of over 200 tales at least one story you would have sworn was true. Jan Harold Brunvand has been collecting and studying this modern folklore for over twenty years. In *Too Good to Be True* he captures the best stories in their best retellings, along with their latest variations and examples of how the stories have changed as they move from person to person and place to place. To help you find your favorite, Brunvand has arranged the tales thematically. "Bringing Up Baby" is full of episodes of child-rearing gone wrong, including the grisly tale of the drugged out baby-sitter who mistakes the kid for a turkey. "Funny Business" showcases stories of infamous lapses in customer service, such as the story of the shockingly expensive chocolate chip cookie recipe. And "The Criminal Mind" features both brilliant --if they were real--scams, as well as the purported antics of the less mentally gifted. Whether you want to become an expert debunker or just have plenty of laughs, this book will surprise and entertain you. Illustrated throughout. "Informative and entertaining.... Brunvand has collected more than 200 of the most-repeated and best-known examples of modern folk-myth."—Tampa Tribune "[N]ot only an entertaining anthology, but an excellent introduction to the study of folklore itself."—Publishers Weekly "A fun read.... All the classics are here from the killer upstairs to the Kentucky Fried Rat."—New City "Resonant stories that express our hidden anxieties ... make us laugh, [or] arouse our fascinated horror."—San Francisco Chronicle Book Review "Informative and entertaining.... Brunvand has collected more than 200 of the most-repeated and best-known examples of modern folk-myth."—Tampa Tribune "[N]ot only an entertaining anthology, but an excellent introduction to the study of folklore itself."—Publishers Weekly

Calculus I Aug 02 2022 This booklet contains typical midterm and final exams that you may encounter in any Calculus I course (for non-Math majors) at just about any university in North America. Calculus I course typically covers the following topics: limits of functions, continuity, derivatives, related rates, maxima and minima (local and global/absolute), the Extreme Value Theorem, the Mean Value Theorem (MVT), indefinite integrals, and the Fundamental Theorem of Calculus. If you are preparing for a Calculus exam, or are reviewing the material from Calculus I, or are thinking about taking this course, this booklet will be quite useful. Note that it is expected that you solve the midterm and final exams in this booklet within one and two hours, respectively. You should first attempt all problems on your own and then check your answers using the respective answer key. You should not be looking at solutions before that. This is the best way for you to learn. Good luck!
