Fire and Rescue Service manual Apr 22 2022 Incidents involving rescue from road vehicles are dramatically increasing in frequency. There are some 3500 deaths on the road each year, with 35,000 serious injuries. Modern motor vehicles are becoming safer for occupants, due to advancement in technology, so persons are more likely to survive high impact speeds, but are also more likely to become entrapped. The Fire and Rescue Service, as the primary rescue service,

requires national guidance to ensure a similar standard of response anywhere in the UK. This manual is designed to highlight current best practice with regard to vehicle rescue techniques and first responder trauma care. Each chapter forms an independent reference source, but the publication as a whole forms a complete guide. Chapters cover: vehicle design and construction; dealing with incidents; safety procedures; operational procedures; extrication equipment; medical considerations and trauma care; Integrated Personal Development System (I.P.D.S.). Appendices cover: Highways Agency/Fire and Rescue Service memorandum of understanding; training and general information; and emergency services personnel (ESP) aide m emoire. The CD-ROM, "Vehicle extrication techniques", is a multi media guide to rescue tool handling and extrication techniques.

Comparative Evaluation of XML Information Retrieval Systems Mar 29 2020 This book constitutes the thoroughly refereed post-proceedings of the 5th International Workshop of the Initiative for the Evaluation of XML Retrieval, INEX 2006, held at Dagstuhl Castle, Germany, in December 2006. The 49 revised full papers presented were carefully selected for presentation at the workshop and went through a subsequent round of careful reviewing and revision. The papers are organized in topical sections on methodology, and 7 additional tracks on ad-hoc, natural language processing, heterogeneous collection, multimedia, interactive, use case, as well as document mining.

Advances in Case-Based Reasoning Apr 10 2021 The papers collected in this volume were presented at the 6th European Conference on Case-Based Reasoning (ECCBR 2002) held at The Robert Gordon University in Aberdeen, UK. This conference followed a series of very successful well-established biennial European workshops held in Trento, Italy (2000), Dublin, Ireland (1998), Lausanne, Switzerland (1996), and Paris, France (1994), after the initial workshop in Kaiserslautern, Germany (1993). These meetings have a history of attracting first-class European and international researchers and practitioners in the years interleaving with the biennial international counterpart ICCBR; the 4th ICCBR Conference was held in Vancouver, Canada in 2001. Proceedings of ECCBR and ICCBR conferences are traditionally published by Springer-Verlag in their LNAI series. Case-Based Reasoning (CBR) is an AI problem-solving approach where problems are solved by retrieving and reusing solutions from similar, previously solved problems, and possibly revising the retrieved solution to reflect differences between the new and retrieved problems. Case knowledge stores the previously solved problems and is the main knowledge source of a CBR system. A main focus of CBR research is the representation, acquisition and maintenance of case knowledge. Recently other knowledge sources have been recognized as important: indexing, similarity and adaptation knowledge. Significant knowledge engineering effort may be needed for these, and so the representation, acquisition and maintenance of CBR knowledge more generally have become important.

Social Work Practice and the Law Nov 05 2020 "This is the first book to give social workers the tools to understand their clients' legal needs and rights and to address them collaboratively and effectively. Lyn Slater and Kara Finck ground their text in a comprehensive grasp of the legal system and the inequities of race, class, and gender that shape clients' experiences. Social Work Practice and the Law is a powerful call for social workers to be passionate and skillful advocates for their clients. Essential reading for social workers and lawyers alike who serve low-income people entangled in systems that so often fail them." Dorothy Roberts, JD Kirkland & Ellis Professor, Northwestern University School of Law Author, Shattered Bonds: The Color of Child Welfare Based on the author's innovative and nationally recognized prototype for inter-professional work at Fordham University, this is the only volume about social work and the legal system that is written from the social worker's perspective. Devoid of "legalese," the book is designed to help social workers develop the ability to reappraise, question, and challenge the law to best serve their clients. It aims to promote the development of a more strategic relationship with the legal system—a partnership that can achieve more creative and just solutions to social problems. Exhaustive in scope, Social Work and the Law identifies current national and international trends and legal movements that support and invite inter-professional, critically competent social work participation. The book also identifies and explains the essential knowledge, skills, values, and attitudes necessary for the attainment of collaborative critical competence when interacting with the legal system. Each chapter includes vivid case studies based on actual collaborations that illustrate the application of theory to practice. Chapters also include legal, social work, and evidence-based resources. Key Features: Promotes a proactive approach to the ways in which social workers can use law to promote clients'

best interests Addresses all domains of social work practice-child welfare, housing law, educational access, disability law, benefits, and more Offers abundant case studies taken from the authors' real-life work Devoid of "legalese" and written from a social worker's perspective

Consultants and Consultancy: the Case of Education Jan 07 2021 This book is a comprehensive study into and about consultants doing consultancy, and having influence in ways that generate concerns about an emerging 'consultocracy', with privileged access to governments and public services. It presents a detailed mapping of consultants and consultancy in education as a site of change and modernisation in public sector service provision. It considers consultancy at a

macro-level of globalised policy, at a meso-level of national government policy, and at a micro level with vivid descriptions and analyses of consultants at work. The rapid rise of 'edubusinesses', combined with the restructuring of public services in western style democracies, has generated new types of 'knowledge actors' within education policy. Three main developments that have led to this change are: the entry of education policy and service consultants from within major companies into the public education market place; the emergence of 'celebrity' entrepreneurial actors and private businesses who make interventions into Universities and schools; and the rapid growth of small businesses based on individuals who have relocated their work from the public to the private sector. Such knowledge actors and the complexities they bring to public education are as yet under described and largely un-theorized. Based on current research and drawing upon a range of theoretical tools, this book fills the gap. Gunter and Mills provide an invaluable contribution to scholarship on the neoliberal restructuring of public education by mapping and analyzing the under-examined yet central role of corporate education consultants. Their thoughtful and thorough discussion expands our understanding of how consultants promote and trade in the ideologies of corporate culture. Gunter and Mills show how consultants are integral to both knowledge making practices in schools and a radical reform agenda for schools in the UK and around the globe. This is an accessible and important volume for not just policy and politics scholars but anyone concerned about defending public forms of education and associated living at a moment when they are increasingly being positioned for pillage by profiteers. Sibling Abuse Trauma Jul 21 2019 This book describes an integrative, strengths-based approach to individual and family psychotherapy guided by the effects of abuse trauma on the development of sibling relationships. It fills a void in the training and education of family violence professionals and validates sibling experiences as an important part of human development. The second edition has been revised and updated to reflect more than 15 years of advances in the child maltreatment field. Current essential information on sibling development is provided to clarify the context in which sibling relationships unfold, and research on sibling relationships throughout the life course is incorporated into a clinical approach for treating victims and survivors. This second edition, much like the first, focuses primarily on assessment and treatment. Rather than choosing to concentrate solely on sibling sexual abuse or assault, the book applies a more inclusive, integrative approach to the study of sibling abuse trauma. The clinical material and experiences portrayed take a trauma-informed systemic orientation and represent children, families, and adults who may not have been described adequately elsewhere. Concrete illustrations and extended session transcripts demonstrate therapeutic principles in action. Whether you incorporate these findings into your clinical practice or become inspired to conduct your own research, Sibling Abuse Trauma will improve your understanding of how to treat and evaluate individuals and families with sibling abuse-related concerns.
