Multilingual Book Production Jan 07 2021 The universal process of globalisation brings the peoples, cultures and languages of the world closer together. But this process does not have to make them more the same. The emerging technological tools of digital text creation and manufacture make possible quite the opposite - the revival of small cultures and languages. This books sets out to argue two things. Firstly, that the technological, commercial and cultural forces of globalisation are moving into a very complex phase in which the effects on the Australian publishing industry may not be what we expect. They need not fortify and extend the technological, commercial and cultural domination of the multinational corporations and the English language, but could become agents which foster increasing cultural diversity, greater local commercial autonomy, and the revival of local and ancestral languages and culture. The second aim of this book is to discuss the technological, human skills and enterprise possibilities for Australia, a small, multicultural country in an economic region where the English language is becoming less important.

Scripts of Blackness May 11 2021 Scripts of Blackness shows how the early modern mass media of theatre and performance culture at-large helped turn blackness into a racial category, that is, into a type of difference justifying emerging social hierarchies and power relations in a new world order driven by colonialism and capitalism. In this book, Noémie Ndiaye explores the techniques of impersonation used by white performers to represent Afro-diasporic people in England, France, and Spain in the sixteenth and seventeenth centuries, using a comparative and transnational framework. She reconstructs three specific performance techniques—black-up (cosmetic blackness), black-speak (acoustic blackness), and black dances (kinetic blackness)—in order to map out the poetics of those techniques, and track a number of metaphorical strains that early modern playtexts regularly associated with them. Those metaphorical strains, the titular scripts of blackness of this book, operated across national borders and constituted resources, as they provided spectators and participants with new ways of thinking about the Afro-diasporic people who lived or could/would ultimately live in their midst. Those scripts were often gendered and hinged on notions of demonization, exclusion, exploitation, animalization, commodification, sexualization, consensual enslavement, misogynoir, infantilization, and evocative association with other racialized minorities. Scripts of Blackness attempts to grasp the stories that Western Europeans told themselves through performative blackness, and the effects of those fictions on early modern Afro-diasporic subjects.

The Star-spangled Screen Nov 17 2021 The American World War II film depicted a united America, a mythic America in which the average guy, the girl next door, the 4-F patriot, and the grieving mother were suddenly transformed into heroes and heroines, warriors and goddesses. The Star-Spangled Screen examines the historical accuracy -- or lack thereof -- of films about the Third Reich, the Resistance, and major military campaigns. Concerned primarily with the films of the war years, it also includes discussions of such postwar movies as *Battleground* (1949), *Attack!* (1956), *The Bridge on the River Kwai* (1957), and *Patton* (1970). This revised edition includes a new afterword that covers more recent films, such as *Sophie's Choice* (1982), *Biloxi Blues* (1986), and *Schindler's List* (1993). The Star-Spangled Screen makes a major contribution to popular culture by recreating an era that, for all its tragedy, was one of the most creative in the history of American film.

AppleScript: The Missing Manual Oct 28 2022 From newspapers to NASA, Mac users around the world use AppleScript to automate their daily computing routines. Famed for its similarity to English and its ease of integration with other programs, AppleScript is the perfect programming language for time-squeezed Mac fans. As beginners quickly realize, however, AppleScript has one major shortcoming: it comes without a manual. No more. You don't need a degree in computer science, a fancy system administrator title, or even a pocket protector and pair of nerdy glasses to learn the Mac's most popular scripting language; you just need the proper guide at your side. AppleScript: The Missing Manual is that guide. Brilliantly compiled by author Adam Goldstein, AppleScript: The Missing Manual is brimming with useful examples. You'll learn how to clean up your Desktop with a single click, for example, and how to automatically optimize pictures for a website. Along the way, you'll learn the overall grammar of AppleScript, so you can write your own customized scripts when you feel the need. Naturally, AppleScript: The Missing Manual isn't merely for the uninitiated scripter. While its hands-on approach certainly keeps novices from feeling intimidated, this comprehensive guide is also suited for system administrators, web and graphics professionals, musicians, scientists, mathematicians, engineers, and others who need to learn the ins and outs of AppleScript for their daily work. Thanks to AppleScript: The Missing Manual, the path from consumer to seasoned scripter has never been clearer. Now you, too, can automate your Macintosh in no time.

Fluent Forever Oct 24 2019 NATIONAL BESTSELLER □ For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. □ A brilliant and thoroughly modern guide to learning new languages. □ Gary Marcus, cognitive psychologist and author of the New York Times bestseller Guitar Zero At thirty years old, Gabriel Wyner speaks six languages fluently. He didn't learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

Using Computers in Linguistics Jul 01 2020 Computing has had a dramatic impact on the discipline of linguistics and is shaping the way we conceptualize both linguistics and language. Using Computers in Linguistics provides a non-technical introduction to recent developments in linguistic computing and offers specific guidance to the linguist or language professional who wishes to take advantage of them. Divided into eight chapters, each of the expert contributors focus on a different aspect of the interaction of computing and linguistics looking either at computational resources: the Internet, software for fieldwork and teaching linguistics, Unix utilities, or at computational developments: the availability of electronic texts, new methodologies in natural language processing, the development of the CELLAR computing environment for linguistic analysis.
