Diesel's Rational Heat Motor Sep 10 2020 Excerpt from Diesel's Rational Heat Motor: A Lecture Our German contemporary, the Zeitschrift des Vereines Deutscher Ingenieure, contains a lecture delivered by Rudolph Diesel at the general meeting of the society at Cassell,

held June 16, 1897. As we are convinced of the great interest American engineers are taking in the scientific advancement and practical development of the gas-engine, we deemed it advisable to furnish the readers of Progressive Age with an exact translation of said article, including reproduction of cuts and accompanying tables. After some introductory remarks, Mr. Diesel continues as follows: In regard to the high state of development of the steam-engine of to-day, it is a generally known fact that in the best triple expansion steam-engines of over 1,000 horse-power, from 12 to 13 per cent. only of the whole heat contained in the fuel is converted into actual work; only 9 per cent. from smaller double expansion engines down to 150 to 200 horse-power; 5 per cent. from small engines down to 50 horse-power, provided condensation is used, and far less from the smaller steam-engines and those without condensation. We all know the steam-engine to be one of the most perfect instruments of modern industry, brought to that height by our most able men having shown their best of talents in its development. In view of this fact, the figures given are exceedingly low, nearly incomprehensible, and although this is generally known, we should be reminded of it as often as possible, referring to such work, for example, as the researches of Zeuner and Schroter. In practice, however, this theoretical cycle can be executed only approximately. Therefore, we call in the total or economical efficiency. Issues in Midterm Analysis and Forecasting 1998 Nov 12 2020 Issues in Midterm Analysis  
and Forecasting 1998 (Issues) presents a series of nine papers covering topics in analysis and  
modeling that underlie the Annual Energy Outlook 1998 (AEO98), as well as other significant  
issues in midterm energy markets. AEO98, DOE/EIA-0383(98), published in December 1997,  
presents national forecasts of energy production, demand, imports, and prices through the  
year 2020 for five cases -- a reference case and four additional cases that assume higher and  
lower economic growth and higher and lower world oil prices than in the reference case. The  
forecasts were prepared by the Energy Information Administration (EIA), using EIA's National  
Energy Modeling System (NEMS). The papers included in Issues describe underlying analyses  
for the projections in AEO98 and the forthcoming Annual Energy Outlook 1999 and for other  
products of EIA's Office of Integrated Analysis and Forecasting. Their purpose is to provide  
public access to analytical work done in preparation for the midterm projections and other  
unpublished analyses. Specific topics were chosen for their relevance to current energy issues  
or to highlight modeling activities in NEMS. 59 figs., 44 tabs.

Urban Air Pollution in Asian Cities Sep 22 2021 Air pollution has become part of the daily  
existence of many people who work, live and use the streets in Asian cities. Each day millions  
of city dwellers breathe air polluted with concentrations of chemicals, smoke and particles that  
dramatically exceed World Health Organization guideline values. Deteriorating air quality has  
resulted in significant impacts on human health and environment in Asia. This book provides a  
comprehensive and comparative assessment of the current status and challenges in urban air  
pollution management in 20 cities in the Asian region. It examines the effects on human health  
and the environment and future implications for planning, transport and energy sectors.

National and local governments have begun to develop air quality management strategies to  
address the deterioration in urban air quality; however, the scope and effectiveness of such  
strategies vary widely. This book benchmarks these air quality management strategies,  
examines successes and failures in these cities and presents strategies for improving air  
quality management in cities across Asia and the rest of our rapidly urbanizing world.  
Information on air quality in Asia is clearly presented with easy-to-read city profiles, tables and  
graphs. This is an essential resource for all those concerned with urban air quality  
management, not just in Asia but in cities across our rapidly urbanizing world. Cities covered  
Bangkok, Beijing, Busan, Colombo, Dhaka, Hanoi, Ho Chi Minh City, Hong Kong, Jakarta,

Biofuels Nov 05 2022 Amongst concerns about climate change, energy security decline and depletion of fossil fuels, this book explores the high importance of and interests in alternative energy resources. Many studies have shown that biomass fuels are sustainable, environmentally friendly and can be the most appropriate replacement to the depleting crude oil. Additionally, they can expand green landscapes, create new job opportunities, be directly utilised in standard power systems and improve combustion performance. Biomass fuels can be limited due to production cost and competition with food. Therefore, plant and food wastes play an important role in reducing these costs and recycling dump bio-materials. Production of biofuels from non-food biomass has emerged as a sustainable option to tackle the problems associated with growing demands for energy.
