Teaching—The Imperiled Profession Sep 20 2019 What is it really like to be a teacher today?

Teaching—The Imperiled Profession goes beyond conventional analyses, to probe the profession and various threats to its viability. Daniel L. Duke has drawn on his own and current educational research—including surveys of teacher opinion, interviews with teachers, and press coverage of educational issues—to uncover and examine a complex array of factors that contribute to the troubled state of the profession and the unprecedented discouragement of its practitioners. The book also analyzes traditional sources of support. Teaching—The Imperiled Profession provides prospective teachers with a realistic picture of the profession today. It identifies a set of concerns on which citizens might reasonably focus attention, in order to forestall any future deterioration. It provides the educator, administrator, and policy-maker with a comprehensive set of recommendations for revitalizing the profession. The book also serves as a concise history of the teaching profession as it has developed in the United States during the twentieth century.

Vouchers and the Provision of Public Services Jun 22 2022 For decades, the use of vouchers has been widely debated. But often lost in the heat of debate is the fact that

vouchers are just another tool in the government's tool chest, a restricted subsidy that falls somewhere between the extremes of cash and direct government provision of services. The instrument itself is not new—the 1944 GI Bill of Rights was a voucher, and vouchers for food, college aid, and housing have been in place for decades. Until now, however, the study of vouchers has been restricted to a few controversial applications. This volume, which grew out of a conference sponsored by the Brookings Institution, the Urban Institute, and the Committee for Economic Development, fills the gap, offering a framework for comparative analysis of specific policy issues related to vouchers. Its 16 essays address the economics, politics, and legal issues of voucher use and explore how vouchers are currently employed in the United States and abroad for education, child care, job training, housing, and health care. C. Eugene Steuerle is a senior fellow at the Urban Institute and has worked under four different U.S. presidents on a variety of reform issues in such areas as social security, budget, tax, and health policy. Robert D. Reischauer, a senior fellow in Economic Studies at the Brookings Institution, was director of the Congressional Budget Office from 1989 to 1995. George Peterson is a senior fellow at the Urban Institute; from 1976 to 1985 he directed the Institute's Public Finance Research Center. Van Doorn Ooms, senior vice president and director of research at the Committee for Economic Development, was formerly executive director for policy and chief economist of the Committee on the Budget, U.S. House of Representatives, 1989-1990, and was the Budget Committee's chief

economist from 1981 to 1988.

The Public Understanding of Assessment Dec 16 2021 Assessment of educational achievement, whether by traditional examinations or by teachers in schools, attracts considerable public interest, particularly when it is associated with 'high stakes' outcomes such as university entry or selection for employment. When the individual's results do not chime with their or their teachers' expectations, doubts creep in about the process of assessment that has arrived at this result. However, educational assessment is made up of many layers of complexity, which are not always clear to the general public, including teachers, students, and parents, and which are not easily understood outside of the expert assessment community. These layers may be organized in highly co-dependent relationships that include reliability, validity, human judgment, and errors, and the uses and interpretations of the various types of assessment. No-one could reasonably argue that the

principles and complexities of educational assessment should be core learning in public education, but there is a growing realization that trust in the UK assessment system is under some threat as the media and others sensationalize or politicize any problems that arise each year. This book offers the first comprehensive overview of how the general public is considered to perceive and understand a wide variety of aspects of educational assessment, and how this understanding may be improved. This book was originally published as a special issue of the Oxford Review of Education.

Reform in School Mathematics and Authentic Assessment Oct 02 2020 Today new ways of thinking about learning call for new ways for monitoring learning. Reform in School Mathematics builds from the vision that assessment can become the bridge for instructional activity, accountability, and teacher development. It places teachers in key roles while developing the theme that we cannot reform the way in which school mathematics is taught without radically reforming the ways the effects of that teaching are monitored. Among others, this volume addresses the issues of the specification of performance standards, the development of authentic tasks, the measure of status and growth or a combination, the development of psychometric models, and the development of scoring rubrics. The new models proposed in this book give teachers a wealth of non-traditional assessment strategies and concrete ways to obtain measures of both group and individual differences in growth.
