Perspectives on Philosophy of Management and Business Ethics Nov 24 2019 This book presents a selection of articles with focus on the theoretical foundations of business ethics, and in particular on the philosophy of management and on human rights and business. This implies identifying and discussing conflicts as well as agreement with regard to the philosophical and other foundations of business and management. Despite the general interest in corporate social responsibility and business ethics, the contemporary discussion rarely touches upon the normative core and philosophical foundations of business. There is a need to discuss the theoretical basis of business ethics and of business and human rights. Even though the actions and activities of business may be discussed from a moral perspective, not least in the media, the judgments and opinions relating to business and management often lack deeper moral reflection and consistency. Partly for this reason, business ethicists are constantly challenged to provide such moral and philosophical foundations for business ethics and for business and human rights, and to communicate them in an understandable manner. Such a challenge is also of scientific kind. Positions and opinions in the academic field need to be substantiated by thorough moral and theoretical reflection to underpin normative approaches. Far too often, business ethicists may agree on matters, which they approach from different and sometimes irreconcilable philosophical standpoints, resulting in superficial agreement but deeper-lying disagreement. In other cases, it may be of high relevance to identify philosophical standpoints that despite conflicting fundamentals may arrive at conclusions acceptable to everyone.

It also identifies the key elements of the concept of family business reputation management and the relationship between them and practical recommendations for the use of reputation management concepts in improving the functioning of family businesses. The developed model can undoubtedly be seen as a pioneering contribution to research into the competitiveness of enterprises. The Critique of Management Apr 10 2021 This book reflects on the nature of business management to contribute to the development of a philosophy and ethics of management. It engages in conceptual engineering of management to delineate the phenomenon of management and, as a result, to open a new perspective on management beyond its self-evident conceptualization. After questioning the self-evident concept of management, the author develops a philosophy of management with six dimensions of the nature of management: management as participation; management as resistance and responsive action; management as constitution of meaning; management as politico-economic governance; management as non-reductive stakeholder engagement; and management as epistemic insufficient entrepreneurship. These six dimensions of management are taken as points of departure to develop an integrated concept of business ethics, an individual competence for ethical business management, and a concept of ethical codes for corporate social responsible behavior. This new conception of philosophy of management and business ethics can guide future philosophical and empirical work on the nature of management. The Critique of Management is an excellent resource for researchers, students, and professionals interested in philosophy of management, business ethics, and corporate social responsibility.

Business and Society Mar 29 2020 The world of business is constantly evolving and management education institutions will likely face a number of challenges in keeping up with these changes. While most books focus on the needs of management education institutions, this work addresses the needs of the corporate world in the era of the Fourth Industrial Revolution. Featuring an extensive research study spanning 11 countries, it offers a unique perspective on the business challenges and developmental needs of companies in emerging and recently emerged economies, and on the missing links between those needs and management education. Using both company-specific and country-level data, the book provides businesses and educators with rare insights and recommendations on strengthening existing partnerships (or establishing them anew) between management education institutions and the corporate sector in order to make management education relevant for the 21st century. The book argues that 'relevance' should take the center-stage of all higher education institutions in order to accomplish their third mission, namely service to society. This is especially important for management education institutions, whose mission is to mold future managers and leaders who can have a significant influence on economic success and the wellbeing of society.

Processes serve as a coordination mechanism, and the aim of business process management is to improve the organization's effectiveness and efficiency in adapting to change, and maintaining competitive advantage. In *Business Process Management*, Kumar argues for the value of looking at businesses as a collection of processes that cut across departments, and for breaking down functional silos. The book provides an overview of the basic concepts in this field before moving on to more advanced topics such as process verification, flexible processes, process security and evaluation, resource assignment, and social networks. The book concludes with an examination of the future directions of the discipline. Blending a strong grounding in current research with a focus on concepts and tools, *Business Process Management* is an accessible textbook full of practical examples and cases that will appeal to upper level students.
