Modulating Glial Cells Phenotype: New Findings and

Therapies Jan 27 2022 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very

popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

New Findings about Old-growth Forests Dec 26 2021

The Other Brain May 31 2022 Despite everything that has been written about the brain, a potentially critical part of this vital organ has been overlooked—until now. The Other Brain examines the growing importance of glia, which make up approximately 85 percent of the cells in the brain, and the role they play in how the brain functions, malfunctions, and heals itself. Long neglected as little more than cerebral packing material, glia (meaning “glue”) are now known to regulate the flow of information between neurons and to repair the brain and spinal cord after injury and stroke. But scientists are also discovering that diseased and damaged glia play a significant role in psychiatric illnesses such as schizophrenia and depression, and in neurodegenerative diseases such as Parkinson’s and Alzheimer’s. Diseased glia cause brain cancer and multiple sclerosis and are linked to infectious diseases such as HIV and prion disease (mad cow disease, for example) and to chronic pain. The more we learn about these cells that make up the “other” brain, the more important they seem to be. Written by a neuroscientist who is a leader in glial research, The Other Brain gives readers a much more complete understanding of how the brain works and an intriguing look at potentially revolutionary developments in brain science and

medicine.

Health and Academic Achievement Sep 22 2021 Emotional, physical and social well-being describe human health from birth. Good health goes hand in hand with the ability to handle stress for the future. However, biological factors such as diet, life experiences such as drug abuse, bullying, burnout and social factors such as family and community support at the school stage tend to mold health problems, affecting academic achievements. This book is a compilation of current scientific information about the challenges that students, families and teachers face regarding health and academic achievements. Contributions also relate to how physical activity, psychosocial support and other interventions can be made to understand resilience and vulnerability to school desertion. This book will be of interest to readers from broad professional fields, non-specialist readers, and those involved in education policy.

The New Finding Sherlock's London May 19 2021 "...Time, the Blitz, and urban development have taken their toll, but much of what Sherlock 'saw', is still there.... To help find Sherlock's London, Thomas Bruce Wheeler, a London expert, has identified over three hundred sites, placed them in their adventure context, and cross-referenced them by their nearest London Underground Station." -- Cover, p. [4].

Feral City: On Finding Liberation in Lockdown New York

Dec 02 2019 What happens when an entire social class abandons a metropolis? This genre-bending journey through lockdown New York offers an exhilarating, intimate look at a city returned to its rebellious spirit. The pandemic lockdown of 2020 launched an unprecedented urban experiment. Traffic disappeared from the streets. Times Square fell silent. And half a million residents fled the most crowded city in America. In this innovative and thrilling

book, author and social critic Jeremiah Moss, hailed as “New York City’s career elegist” (New York Times), explores a city emptied of the dominant class—and their controlling influence. “Plagues have a disinhibiting effect,” Moss writes. “As the normal order is suspended, the repressive force of civilization lifts and our rules fall away, shifting the boundaries of society and psyche.” In public spaces made vibrant by New Yorkers left behind, Moss experienced an uncanny time warp. Biking through deserted Manhattan, he encountered the hustlers, eccentrics, and renegades who had been pressed into silence and invisibility by an oppressive, normative gentrification, now reemerging to reclaim the city. For one wild year the streets belonged to wandering nudists and wheelie bikers, mystical vagabonds and performance artists working to disrupt the status quo, passionate activists protesting for Black lives—along with the everyday New Yorkers who had been pushed to the margins for too long. Participating in a historic explosion of activism, resistance, and spontaneity, from queer BLM marches to exuberant outdoor dance parties, Moss discovered an intoxicating freedom. Without “hyper-normal” people to constrain it, New York became more creative, connected, humane, and joyful than it had been in years. Moss braids this captivating narrative with an account of his renewed sense of place as a transgender man, weaving together insights from psychoanalysis, literature, and queer theory. A kaleidoscopic vision of a city transformed, *Feral City* offers valuable insight into the way public space and the spaces inside us are controlled and can be set free.

Inferior Jul 21 2021 For hundreds of years it was common sense: women were the inferior sex. Their bodies were weaker, their minds feebler, their role subservient. Science has continued to

tell us that men and women are fundamentally different. But a huge wave of research is now revealing that women are as strong, powerful, strategic, and smart as anyone else. Saini takes readers on a journey to uncover science's failure to understand women and to show how women's bodies and minds are finally being rediscovered.

Strengthening Research Capacity and Disseminating New Findings in Nursing and Public Health Nov 24 2021 Andalus

International Nursing Conference (AINiC) is a dedicated conference aimed at researchers in nursing, public health and other health sciences topics. The 1st AINiC 2017 was held in Padang, West Sumatra, Indonesia, from 25-27 September 2017. The conference theme was "Strengthening Research Capacity and Disseminating New Findings in Nursing and Public Health". This event was successful in bringing together experts, researchers, healthcare professionals, and students worldwide. It was an inspiring occasion for most of the participants and was a great opportunity for research development learning, especially with regard to disseminating new findings in nursing and to stimulate networking of nursing professionals, researchers and educators. The research topics that were presented during the conference have clearly indicated the need for literature development and guidance of clinical practice decisions. We hope this conference has provided ample opportunities for participants to gain a more in-depth understanding of knowledge and renewed perspectives. All these aspects have been acknowledged by the participants during the conference. The 1st AINiC was a rewarding event and we look forward to your attendance and participation in the next AINiC conference that will also provide stimulating research developments, networking and cooperation.

New Findings from Natural Substances Oct 04 2022 New Findings from Natural Substances present the state-of-the-art and future prospects for the application of biomolecules in the pharmaceutical, agricultural, food and industrial sectors. The book presents eight reviews contributed by more than twenty experts on interesting natural substances, and plant sources, that serve as sources of natural remedies for a variety of ailments. The reviews in the book cover the use of herbs like Heliotropium and Astragalus. Additional health benefits of extracts from essential oils, *Caenorhabditis elegans*, and olive oil, as well as the medicinal use of rosmarinic acid and hydrolates. The contributions highlight a range of pharmacological agents from natural sources that have anti-cancer, anti-inflammatory, cardioprotective and neuroprotective effects. The contents are presented in a simple and organized style. The book will broaden the knowledge about biological products for a variety of readers – generalists, students and researchers, alike.

New Finds of Fossil Mammals from the Pleistocene Strata of the Philippines Aug 02 2022

Creating Life in the Lab Sep 03 2022 Each year brings to light new scientific discoveries that have the power to either test our faith or strengthen it--most recently the news that scientists have created artificial life forms in the laboratory. If humans can create life, what does that mean for the creation story found in Scripture? Biochemist and Christian apologist Fazale Rana, for one, isn't worried. In *Creating Life in the Lab*, he details the fascinating quest for synthetic life and argues convincingly that when scientists succeed in creating life in the lab, they will unwittingly undermine the evolutionary explanation for the origin of life, demonstrating instead that undirected chemical processes cannot produce a living entity.

Designing and Managing Your Research Project Jan 03 2020

Written for advanced undergraduate students, postgraduate students planning theses and dissertations and other early career researchers, *Designing and Managing Your Research Project* helps you successfully plan and complete your research project by showing the key skills that you will need. The book covers: " choosing research methods " developing research objectives " writing proposals " literature reviews " getting ethics approval " seeking funding " managing a project " software skills " working with colleagues and supervisors " communicating research findings " writing reports, theses and journal articles " careers in research. *Designing and Managing Your Research Project* includes lots of examples, case studies and practical exercises to help you learn the research skills you will need and also to help you complete crucial project tasks. A key feature is its user-friendly guidance on planning projects and accessing information from the Internet.

Cyberbullying through the New Media Jul 01 2022

Cyberbullying is one of the darker and more troubling aspects to the growing accessibility of new media technologies. Children in developed countries engage with cyberspace at younger and younger ages, and the use of the internet as a means to bully and harass has been greeted with alarm by educationalists, parents, the media, and governments. This important new book is the result of a four-year international collaboration, funded by the EU, to better understand how we can cope and confront cyberbullying, and how new media technologies can be used to actually support the victims of such abuse. The articles initially define the historical and theoretical context to cyberbullying, before examining key issues involved in managing this pervasive phenomenon. Coverage includes: The definition and measurement of cyberbullying. The legal challenges in tackling cyberbullying across a number of international contexts. The role of mobile phone companies and Internet service providers in monitoring and prevention How the media frame and present the issue, and how that influences our understanding. How victims can cope with the effects of cyberbullying, and the guidelines and advice provided in different countries. How cyber-bullying can continue from school into further education, and the strategies that can be used to prevent it. The ways in which accessing 'youth voice', or maximising the contribution of young people themselves to the research process, can enhance our understanding The book concludes with practical guidance to help confront the trauma that cyberbullying can cause. It will be a valuable resource for researchers, students, policy makers and administrators with an interest in how children and young people are rendered vulnerable to bullying and harassment through a variety of online channels.

Finding Data on Women Apr 05 2020 This Guide focuses on the data sources at Statistics Canada, the major Canadian provider of gender-specific data. Readers will not find any data or statistics per se. What they will find is information on how and where to

find data and statistics on a wide range of economic, social and legal issues related to gender equality. Demographics, housing and wealth, family status and living arrangements, paid and unpaid work, income, health and well-being, and violence and the justice system are among the many topics covered in this Guide. Given the diversity among women in Canada, readers will find information as to the existing data sources on Aboriginal women, immigrant women, visible minority women, and women with disabilities. For other groups of women, including lesbians, no national statistical data are available at present.

New Findings in Long-Wave Research Feb 25 2022 This book presents new methods for the analysis of time series and the identification of long waves. In Part One it is shown that new time series analyses confirm the existence of Kondratieff long waves in economic growth for the 19th and 20th centuries. Part Two presents evidence on long waves in aggregate profit rates for selected major industrialized countries. Part Three covers theoretical discussions and attempts at modeling social, economic and technological factors in long waves.
