Keyword Search in Databases Oct 04 2022 It has become highly desirable to provide users with flexible

ways to query/search information over databases as simple as keyword search like Google search. This book surveys the recent developments on keyword search over databases, and focuses on finding structural information among objects in a database using a set of keywords. Such structural information to be returned can be either trees or subgraphs representing how the objects, that contain the required keywords, are interconnected in a relational database or in an XML database. The structural keyword search is completely different from finding documents that contain all the user-given keywords. The former focuses on the interconnected object structures, whereas the latter focuses on the object content. The book is organized as follows. In Chapter 1, we highlight the main research issues on the structural keyword search in different contexts. In Chapter 2, we focus on supporting structural keyword search in a relational database management system using the SQL query language. We concentrate on how to generate a set of SQL queries that can find all the structural information among records in a relational database completely, and how to evaluate the generated set of SQL queries efficiently. In Chapter 3, we discuss graph algorithms for structural keyword search by treating an entire relational database as a large data graph. In Chapter 4, we discuss structural keyword search in a large tree-structured XML

database. In Chapter 5, we highlight several interesting research issues regarding keyword search on databases. The book can be used as either an extended survey for people who are interested in the structural keyword search or a reference book for a postgraduate course on the related topics. Table of Contents: Introduction / Schema-Based Keyword Search on Relational Databases / Graph-Based Keyword Search / Keyword Search in XML Databases / Other Topics for Keyword Search on Databases
Understanding Sponsored Search May 31 2022 This book addresses the underlying foundational elements, both theoretical and methodological, of sponsored search. As such, the contents are less affected by the ever-changing implementation aspects of technology. Rather than focusing on the how, this book examines what causes the how. Why do certain keywords work, while others do not? Why does that ad work well, when others that are similar do not? Why does a key phrase cost a given amount? Why do we measure what we do in keyword advertising? This book speaks to that curiosity to understand why we do what we do in sponsored search. The content flows through the major components of any sponsored search effort, regardless of the underlying technology or client or product. The book addresses keywords, ads, consumers, pricing, competitors, analytics, branding, marketing and advertising, integrating these separate components into an

incorporated whole. The focus is on the critical elements, with ample illustrations and with enough detail to lead the interested reader to further inquiry.

Word Searching Without a Net: 1,556 Puzzles (Sans Answer Key) Jan 27 2022

How often do you consult the answer key for word searches? If you are like most people, the answer is rarely, if ever. So instead of setting aside precious space for an answer key, this book gives you more

fun puzzles to solve. In a book of this size, that translates into about 500 more, for a total of 1,556 puzzles with 31,120 words -- all offered to you for a price that is far lower than similarly sized word search books. Word Searching Without A Net makes a perfect gift, either as a challenge to yourself, or to call your friends' bluff when they tell you they are such word search experts that they never need to check the answer key anyway. And yes, all the words are in the puzzles, no tricks, promise! From the back cover: 1,556 Puzzles 31,120 Words No Answer Key Are you up for the challenge?----- A fresh voice in game book publishing, Charles Waterford is committed to bringing you the finest puzzle collections, in the firm belief that top quality means top fun! All books published by Charles Waterford are printed on thick, non-bleed-through paper, in contrast to the newsprint puzzle books you find in most grocery store checkout aisles. They make perfect gifts for the puzzle lover in your life.

[Design, Performance, and Analysis of Innovative Information Retrieval](#) Jun 07 2020

Daily procedures such as scientific experiments and business processes have the potential to create a huge amount of data every day, hour, or even second, and this may lead to a major problem for the future of efficient data search and retrieval as well as secure data storage for the world's scientists, engineers, doctors, librarians, and business managers. Design,

Performance, and Analysis of Innovative Information Retrieval examines a number of emerging technologies that significantly contribute to modern Information Retrieval (IR), as well as fundamental IR theories and concepts that have been adopted into new tools or systems. This reference is essential to researchers, educators, professionals, and students interested in the future of IR.

INTELLIGENCE AND PRIVATE INVESTIGATION
Feb 13 2021 While many books have been written about private investigation, this text is different in that it does not deal with the subject from traditional perspectives. It examines how private investigation has grown, particularly since 9-11, into an exacting and sophisticated occupation. The book looks at the key issues in what it describes as private intelligence; that is, intelligence activities practiced by operatives other than law enforcement, national security, or the military. Eleven world experts contribute chapters addressing key practice issues concerning the skills, abilities, and knowledge necessary in the new realm of private intelligence. The initial three chapters provide a report on present-day private intelligence and offer an overview of the specifics of intelligence issues that follow. Eleven subsequent chapters take the reader progressively through various intelligence-related subjects.

Major topics presented include: skills for intelligence-led private investigators, open source intelligence, target profiling, fraud intelligence, political intelligence, anti-terrorist and anti-gang intelligence, illicit organizations and financial intelligence, counterintelligence, clandestine communication methods, preparing a prosecution brief, legal issues for intelligence-led private investigators, and ethical issues for intelligence-led private investigators.

Additionally, the text contains several features that will appeal to both students and instructors. These include a set of key terms and phrases, a number of study questions, and learning activities in each chapter. Written in a clear and concise style, the text provides a foundation of practical and useful information. It will be a most important and unique resource for undergraduate students in private investigation courses as well as intelligence practitioners and general readers interested in self-development study.
